

## "Correct cleaning of PVC windows"

Invitation to the free event series "TechnologieForumZukunft" for window manufacturer and planner on October 26, 2023

Dear Ladies and Gentlemen,

With the topic "Correct cleaning of PVC windows", the RAL Gütegemeinschaft (GKFP) continues its interactive event series "TechnologieForumZukunft".

**The GKFP offers architects, window manufacturers, planners and other interested parties the opportunity to inform themselves about the state of the art in a condensed form and to join in the discussion.**

The hybrid event will take place on **Thursday, October 26, 2023, from 10:00-12:00**. We will broadcast live from the premises of **multi-media systeme AG, Im Hafnersgrund 4, 75045 Walzbachtal**.

You can either participate **online** or be there **on site**.

### THAT YOU CAN EXPECT

- **Two impulse lectures** await you: In the first lecture, Harald Neunzehn (RENOLIT SE) will report on the "**Approach and cleaning agents for cleaning foiled surfaces**" from the perspective of system providers and foil manufacturers. His presentation will be complemented by a live demonstration. In particular, Marco Themel (FENOPLAST Fügetechnik GmbH) will explain the "**correct cleaning of white PVC plastic profiles**". In his presentation, he will discuss the distinction between solvent-based and water-based cleaning agents and talk about the selection of the right cleaning agent, including an illustrative practical section.
- In the panel discussion, experts present will cover the following five perspectives: **system houses** (Dominik Mathes; Aluplast GmbH), **maintenance cleaning** (Andreas Grüb, Konrad Hornschuch AG), **science** (Dr. Benjamin Fiedler, IFO Institut für Oberflächentechnik GmbH), **damage cases** (Thomas Haier, IDEAL Fensterbau Weinstock GmbH), and **professional cleaning** (expert tbd.). Experts and practitioners face questions from the moderator and from the audience, which can also be submitted via chat message.
- In **videos**, we convey, among other things, different procedures for cleaning plastic window profiles and glass surfaces, as well as recommendations for the optimal cleaning of these.

You can access the programme and register here: [gkfp.de/en/events](https://gkfp.de/en/events)

The event will be held in German. Participation is free of charge.
